

STATE OF VERMONT VERMONT EMERGENCY MANAGEMENT

DAILY SITUATION REPORT Monday, May 16, 2022

Report Period: 5/15/2022 0700 to 5/16/2022 0700
Vermont State Emergency Operations Center

Status - MONITORING

INCIDENTS AND EVENTS:

NWS Burlington:

In addition to the broken line of thunderstorms that is expected to move into northern New York around 2 pm and shift eastward through the afternoon/evening hours, scattered thunderstorms may develop along/near the spine of the Green Mountains around noon.

Some locations have received significant rainfall over the past 24-48 hours. The threat of flash flooding will be enhanced in these areas, as well as anywhere where storms are able to develop this afternoon. There is a slight risk of severe thunderstorms across the North Country today. Thunderstorms will likely develop into a broken line that will move from west to east across northern New York and Vermont during the afternoon and evening hours. The main threat will be damaging winds, along with heavy rainfall. The heavy rainfall may result in localized flooding of low-lying and poor-drainage areas. Isolated large hail is also possible.

NWS Albany:

Showers and thunderstorms are expected this afternoon into early this evening as a strong cold front approaches. The Storm Prediction Center has continued most eastern New York in an Enhanced Risk for Severe Thunderstorms, with a Slight Risk remaining for western New England. Damaging winds are expected to be the main threat. Isolated large hail and an isolated tornado or two are also possible. Some urban/poor drainage area flooding is also possible with the thunderstorms.
